No. 5975.

FROM THE HON'BLE COLONEL W. R. EDWARDS. C.B., C.M.G., M.D., I.M.S.,
Surgeon-General with the Government of Bengal,

TO THE SECRETARY TO THE GOVERNMENT OF BENGAL,
FINANCIAL DEPARTMENT

Dated Calcutta, the 4th June 1915.

SIR,

I HAVE the honour to submit the following short Report on the working of the Hospitals and Dispensaries in this Presidency for the year 1914, together with the usual Statistical Returns.

2. The report has been delayed owing to the very late receipt of most of the local reports and returns, the last one having reached this office only on the 3rd May. The Eastern Bengal districts were the greatest defaulters, though certain Calcutta Institutions and Western Bengal districts were not free from blame. The failure of the Forms Department to supply forms till the end of January 1915 interfered seriously with the punctual submission of the local reports and returns, especially of the Eastern Bengal districts, where the Bengal forms were introduced for the first time last year.

3. Surgeon-General G. F. A. Harris I.M.S., was at the head of the Medical Department throughout the year. He retired on the 31st March last.

CALCUTTA HOSPITALS AND DISPENSARIES.

4. There has been one addition to the number of hospitals and dispensaries at the Presidency town, viz., Rai Bhagawan Das Bagla Bahadur's Marwari Hospital. It is a private non-aided institution, not under the supervision of Government, and has been in existence since 1902; but as it had not previously furnished annual returns, it was not included in the list. Its inclusion raises the number of medical institutions to 20.

5. During the past year 388,677 patients were treated in these 20 hospitals and dispensaries as compared with 355,782 treated in 19 institutions in 1913. Leaving out the number treated at the newly included Marwari Hospital, the actual increase amounts to 6,685 only, and this increase occurred entirely in the out-door work. The number of in-door patients shows a decrease of 175 in the total, and of 353 in classes I, III and IV institutions. The daily average of in-patients treated in the latter classes of institutions was however larger, viz., 1,432.52 against 1,396.47.

There was a slight improvement in the percentage of recoveries in these institutions, it having been 65.2 per cent. to total treated against 63.3 in 1913. The incidence of deaths was almost equal in both years, being 11.22 per cent. against 10.95.

6. The beds available in classes I, III and IV hospitals show a decrease of 10 compared with the previous year, their number having been 1,889 against 1,899. This reduction was principally due to the closure of the in-door department of the Chandney Hospital, referred to in the last report, and to the occupation of a number of beds in the Howrah General Hospital by nurses pending the con-

struction of their quarters. Against this there was an increase of 12 beds in the Medical College Hospital owing to the opening of the Diphtheria Ward.

7. The high standard of efficiency of the nursing arrangements at the Presidency General and Medical College Hospitals was maintained. The Surgeon-Superintendent of the Presidency General Hospital, however, remarks that the nursing of that hospital has been hampered by the large number of senior nurses leaving on completion of their training and by the fact that many of the probationers left just when they were beginning to be useful. Many of the senior nurses left in order to get married, and others in order to take up private nursing which they find more profitable. It may be necessary to improve the pay and prospects of these nurses. I trust that the Calcutta Hospital Nurses Institution will look into this matter.

The Sambhu Nath Pundit Hospital has just received the financial sanction of Government to introduce the scheme inaugurated by Her Excellency Lady Carmichael for the training of Indian nurses. This scheme, when put into action, will, I think, place the nursing of the patients of this hospital on a sound and satisfactory footing.

8. The past year saw the realization of the scheme for associating Honorary Surgeons and Physicians, members of the Independent Medical Profession with the staff of Government hospitals as Honorary Surgeons and Physicians. The Mayo and Sambhu Nath Pundit Hospitals, which had been marked out as the places where this innovation should first be tried, carried it into effect from the 1st June and 1st July, respectively.

In the Mayo Hospital Drs. U. D. Banerjee, M.R.C.S. (Eng.), L.R.C.P. (Lond.), and S. N. Mukherjee, L.M.S. (Cal.), F.R.C.S. (Edin.), L.M. (Dublin), were appointed respectively as Honorary Physician and Honorary Surgeon for intern patients, and Drs. D. N. Banerjee, L.R.C.P. & S. (Glas., Edin.), L.M. (Rotunda, Dub.), and U. Samanta, M.B. (Cal.), took up the honorary work in the out-door department. The honorary appointments in the out-patients department of the Sambhu Nath Pundit Hospital could not be filled up for lack of suitable candidates. In the in-door department Drs. K. N. Ghosh, M.B. Ch.B. (Edin.), and S. N. Choudhury, M.R.C.S., L.R.C.P. (Lond.), were appointed respectively as Honorary Surgeon and Honorary Physician.

The scheme has, I am glad to say, worked smoothly and well. This happy result is much to the credit of the honorary officers and the additional paid staff employed to help them in their work, all of whom have shown zeal, ability and conscientiousness in the discharge of their duties. The permanent resident staff also worked loyally to make the innovation a success. The change is, however, too recent to enable one to draw any definite deductions regarding the work of the hospitals, more especially as two of the honorary officers, viz., Drs. S. N. Mukherjee and S. N. Choudhury left their appointments $1\frac{1}{2}$ and 2 months before the close of the year, having been granted honorary commissions in the Indian Medical Service, and these vacancies have not yet been filled.

9. Cholera prevailed in the town epidemically, though not in a particularly severe form, causing a heavier mortality than in the previous year, viz., 1,983 against 1,764. Patients treated in hospitals for this disease consequently increased from 739 to 1,064. Those treated in the in-door departments numbered 813 or 242 more than in 1913.

The objectionable practice of treating cholera patients in the same ward with plague patients in the Campbell Hospital came to an end towards the end of the past year on the completion of the Plague Ward to which plague patients were transferred.

The attendance at hospitals and dispensaries for small-pox greatly increased, owing to a sharp out-break of the disease in the town. It numbered 997 against 69 in 1913, of which 370 were treated in the in-door departments as compared with 57 in 1913. The mortality was also heavier, having been 23.5 per cent. against 17.5 in the year before. Of the 25 children admitted into the Campbell Hospital for small-pox 5 only had distinct marks of vaccination and the rest were unprotected. One of the former and 6 of the latter died.

There was a gratifying diminution in the mortality from phthisis among the general population of the town. It came down from 2,118 to 1,867. Hospital statistics also record a fall in the number of in-patients treated for this disease, viz., 607 against 687 in 1913 with a diminished death-rate, viz., 42·66 as compared with 47·45 per cent. Attendance at the out-patient department also fell off from 1,310 to 910.

The incidence of this disease among Europeans, however, seems to have been greater, 89 intern and 24 extern phthisis patients of that class having been treated in the Presidency General Hospital last year against 72 and 22 in 1913. The mortality also increased from 15·27 to 24·71 per cent. I am glad to say that the project for the construction of a ward in this hospital for the separate accommodation of phthisis patients initiated in 1913 is materialising. It is a part of the general scheme for the provision of Phthisis wards in important hospitals. Government has placed a grant of Rs. 35,000 at the disposal of the Bengal Chamber of Commerce to enable them to erect the ward as a fitting tribute to the memory of Lieutenant-Colonel H. W. Pilgrim, I.M.S., the late Surgeon-Superintendent of the Hospital.

The outbreak of plague last year was of an exceptionally mild character, the number of cases having been the lowest recorded since the city was infected. Deaths numbered 442 against 852 in 1913 and 1,831 in 1912. The last case of plague occurred on the 8th October 1914; and from that date, till the 18th January 1915, not a single case was recorded in the city. In December 1914, for the first time for 16 years, the city was officially declared free from plague. The mildness of the outbreak was marked by an abrupt lowering of hospital statistics under plague, which came down from 74 intern and 27 extern patients in 1913 to 37 and 8 in 1914, and by a lower death-rate, viz., 78·37 per cent. against 81·08 in 1913.

10. Surgical operations performed in all classes of institutions taken together numbered 38,925 as compared with 36,106 of the previous year. In classes I, III and IV hospitals, the total number of operations increased from 35,661 to 36,449, and of selected and important operations from 5,368 to 5,545. The death-rate amongst patients operated on was also smaller, having been ·98 per cent. against 1·02 in the preceding year. The surgical record of the Eden Hospital shows a decrease in the total, but there was a satisfactory increase in selected and important operations, of which 1,081 were performed against 854 in the previous year. Among the operations of last year there were 57 operations for the removal of uterine appendages for chronic salpingitis, 44 abdominal hysterectomies, 17 craniotomies, 15 ovariectomies, 12 exploratory laparatomies, 9 caesarian sections, 7 operations for removal of cyst in broad ligament, 6 appendicectomies, 5 decapitations, 5 salpingectomies for ectopic gestation and 2 colotomies.

The operations in the Sambhu Nath Pundit Hospital not only increased in number, but improved in character; 517 selected operations were performed here last year or an increase of 36 over 1913. The mortality after operation was remarkably low, being 18 or ·87 per cent. only. In two particulars, viz., eye operations and confinement cases, past records of this hospital have been greatly improved; cataract extractions increased from 111 to 150 and confinement cases from 56 to 73. It is hoped that with the creation of a new lying-in-room in the hospital this useful branch of work will still further increase.

The Mayo Hospital records an increase of 180 under selected and important operations. The Honorary Surgeon for in-patients performed 10 of them.

11. The *income* of State-Public, Local Fund and Private-Aided Institutions from all sources amounted to Rs. 13,98,164 or an increase of Rs. 90,481 over 1913; while the *expenditure*, excluding amounts invested, aggregated Rs. 13,86,483, the excess over the previous year being Rs. 64,929.

Government paid 3·51 per cent. more on the whole than in 1913. Private donations and subscriptions fell off considerably. The fall is more marked

in the case of Indians, who subscribed Rs. 10,045 less than in 1913 and Rs. 36,658 less than in 1912.

Lieutenant-Colonel Newman, I.M.S., the Surgeon-Superintendent of the Sambhu Nath Pundit Hospital, reports that there was a steady flow of small donations to that hospital from members of the European community. The fund established with the money has been of utmost assistance in distributing spectacles, crutches and many other minor comforts and conveniences to needy patients.

Building charges were largely responsible for the excess under expenditure of the past year. They alone account for an increase of Rs. 38,816, due to the construction of a Diphtheria Ward in the Medical College Hospital, the additions and alterations carried out in the Isolation Block to provide a ward for septic cases from the Eden Hospital, the construction of a Plague Ward in the Campbell Hospital, and of the Staff Nurses' quarters in the Sambhu Nath Pundit Hospital.

DISTRICT HOSPITALS AND DISPENSARIES.

12. This chapter deals with the working of 649 mufassal medical institutions that were on the list last year as compared with 619 institutions of the year before. Seventeen of them came into existence during the year and 19 old institutions were brought on to the list, either on account of having submitted to Government supervision or for having furnished returns. Four of the dispensaries that were in operation in 1913 ceased to exist, and 2 (class V dispensaries) were struck off the list for discontinuing their returns. Certain outlying dispensaries had to be temporarily closed towards the end of the year owing to the shortness of Sub-Assistant Surgeons, a large number of them having been deputed to military duty.

13. The regular dispensaries of all classes treated 5,571,324 patients against 5,182,680 in the previous year. Besides this 130,066 more patients received medical relief at certain Mission and temporary epidemic dispensaries and at hâts and fairs, which were visited by medical officers, including those treated by travelling Medical Officers of the Eastern Bengal State Railway.

The State-Special institutions account for 14,479 intern and 67,108 extern patients, the Railway Hospitals contributed 2,037 intern and 267,163 extern patients to the total, and the rest, viz., 44,089 intern and 5176,448 extern patients were treated at the charitable institutions of classes I, III, IV and V.

The death-rate among patients of all classes of hospitals and dispensaries taken together was 6.43 per cent. as contrasted with the last preceding record of 7.79.

14. Accommodation for 1,705 males and 635 females was available in the charitable institutions of classes I, III and IV or a deficit of 13 beds on the male side and an increase of 3 on the female side in comparison with the accommodation available in 1913. The number of beds in Private Non-aided hospitals rose from 487 to 511 and that in State-Special from 649 to 699, while the beds in Railway hospitals decreased from 267 to 259.

15. There is nothing new to be said with regard to the nursing arrangements in the mufassal hospitals. The difficulties that stand in the way of a proper nursing system in the mufassal have been largely dealt with in previous reports. The only redeeming feature is that the training of Indian women in nursing under the auspices of the Bengal Nursing Association was started last year at some of the centres, *e.g.*, Darjeeling and Kalimpong.

16. The disease most commonly treated was, as usual, malaria. In every thousand attending the hospitals there were 247 malaria patients. Attendance at the in-door departments of classes I, III and IV dispensaries for malaria numbered 6,227 or

an increase of 259 over the preceding year. The death-rate was 6 per cent. the same as in 1913. Medical officers of hospitals and dispensaries were quite alive to the importance of treating malaria patients with effective doses of quinine, and wherever possible they treated cases of uncomplicated malaria with 80 grains, the minimum prescribed by the Provincial Malaria Committee. But the want of funds stood in the way of a wholesale adoption of the new method during the past year. Only 29 institutions were able to attain the prescribed minimum, treating 21,679 patients with 80 grains of quinine while 56 dispensaries could give from 50 to 79 grains on an average. Government issued orders last year that the extra cost involved in the treatment of malaria patients by this method should be borne by District Boards in the case of the dispensaries maintained by them and by Municipalities in the case of the municipal institutions; but only a few District Boards and practically none of the Municipalities came forward with extra grants. The few grants that were given were again in most cases received too late in the year to allow of a fair trial being given to the system.

There was a greater prevalence of small-pox in the Presidency last year. *Small-pox.* The number of patients treated in hospitals and dispensaries consequently increased from 268 in 1913 to 451. Of the 10 children treated as in-patients and whose vaccinal conditions were noted, 6 were protected by vaccination and the remaining 4 were unprotected. All of the former recovered, while 1 of the latter died.

Only 8 cases of plague were treated in the mufassal hospitals last year as compared with 919 in the year before. *Plague.* If hospital statistics can be trusted as an index of the incidence of a particular disease, it looks as if plague had practically died out of the Province.

The number of phthisis patients increased from 4,278 to 4,426. Last year *Phthisis.* Government financed almost all the projects for the provision of separate Phthisis wards in Sadar hospitals. Some of them have already been completed, while others are under construction. It is hoped that before the current year closes this Presidency will be able to boast of having properly equipped wards at almost all district head-quarters, where it will be possible to treat phthisis patients by the open-air method.

17. Nearly 3 per cent. of those who attended the hospitals and dispensaries of classes I, III and IV for medical aid *Surgical Operations.* needed operation. The number of operations performed and of the patients concerned therein were 116,304 and 115,882, or 1,801 and 1,779 in excess of the numbers of the preceding year. *Post-operative mortality* was the same as in 1913, viz., 2 per cent.

18. Excluding opening balance, the total *income* of classes I, III and IV institutions amounted to Rs. 11,22,111 or an *Finance.* increase of Rs. 32,731 over 1913. It comprises of Government contributions 21.36 per cent. (including special grants for phthisical wards), contributions from local funds and municipalities 36.67 and 16.91 per cent., respectively, public subscriptions 17.51 per cent., and income from miscellaneous sources 7.55 per cent. The percentages of income from the same sources in the preceding year were 20.97, 31.17, 16.46, 20.4 and 11.01, respectively.

The public subscriptions include Rs. 10,000 granted by the Maharajadhiraja of Burdwan for the construction of the Lady Carmichael Female Ward at Burdwan; Rs. 5,500 given from the estate of late Babu Bagala Charan Bose for the maintenance of a dispensary at Pingla in the district of Midnapore; and Rs. 5,000 donated by Maharaja Manindra Chandra Nandi of Cassimbazar towards the cost of introducing into the Darjeeling Hospital the Lady Carmichael's scheme for training nurses. The name of the late Babu Kani Ram Agarwala may be mentioned in this connection for having endowed the Jalpaiguri Hospital with a good and capacious female ward at a cost of about Rs. 12,000.

The up-keep of the above hospitals and dispensaries cost Rs. 10,66,901, excluding amounts invested, as compared with Rs. 9,92,962 in the previous year, which was distributed as follows:—Salaries of Medical Officers and

establishment charges 41·61 per cent. against 42·58 in 1913, building and repair charges 20·42 per cent. as compared with 19·85, medical and surgical outfit 20·51 per cent. against 19·25, diet and miscellaneous charges 7·71 and 9·75 per cent. against 8·30 and 10·03 respectively.

19. There were 3 leper asylums in operation in the Presidency, viz., those at Gobra, Bankura and Raniganj. They treated 752 lepers. A sum of Rs. 62,466 was expended for their up-keep, of which Government contributed Rs. 37,548.

20. The advancement of the status of the head of the Medical Department to that of a Surgeon-General and the creation of the post of an Indian Medical Service Personal Assistant to the Surgeon-General received the sanction of the Secretary of State during the past year.

I have only just taken over the medical charge of this Presidency, but I know that Surgeon-General Harris would wish to thank the medical staff of Bengal and the staff of his office for the excellent work they have done during the past year. The medical staff have now been very greatly reduced owing to the war, and there is no doubt that this great depletion will adversely affect our next year's returns.

I have the honour to be,

SIR,

Your most obedient servant,

W. R. EDWARDS,

Surgeon-General with the Govt. of Bengal.

APPENDIX.

STATISTICAL TABLES. HOSPITALS AND DISPENSARIES OF BENGAL, 1914.

STATEMENT A

Showing the number of dispensaries in Bengal during the year 1914.

* This includes Rs. 750 from the Jalapahar cantonment.
 † " " 240 " Eastern Bengal State Railway.
 ‡ The decrease of the opening balance by Rs. 496—less than the closing balance of the previous year was due to the non-receipt of the accounts of the Kalimpong Mission Hospital (Darjeeling) and Barenga Dispensary (Pabna District), which was closed during the year, and to the incorrectness of accounts of some other institutions.
